I'm a hobby photographer. I'll send you two sets of photos, one at a time.
First my own photos, then reference photos I admire.
I want my photos to feel more like the reference photos.
After I send both sets, write me a shooting recipe of at most 7 items. Rules:
- Plain everyday English, short sentences. No statistics or jargon.
- Each item: one concrete thing to do while shooting (where to stand, what to wait for, how to frame, what to look for), the situation it applies to, and one plain sentence on why.
- Refer to my photos by file name, and say which of my photos each item applies to.
显示更多
- Only things done while shooting. No editing, filters or presets.
- Do not state any camera settings as facts about my photos or the references. If you suggest a setting, call it a rule of thumb to try.

Ready

- If something is a guess (for example the time of day or light of the reference photos), say it is a guess.
- Also tell me one specific weakness in my photos, with file names.
Don't give advice yet. Just reply "Ready" and wait for my photos.

共享时隐藏图片

These are my photos (set 1). Don't give advice yet.
Just tell me how many photos you can see, and list their file names.

I can see 15 photos. The file names, in the order they were uploaded:

1. DSC00562.JPG
2. DSC00695.JPG
3. DSC01343.JPG
4. DSC01668.jpg
5. DSC02000.JPG
6. IMG_0397.JPG
7. IMG_1062.JPG
8. IMG_1592.JPG
9. IMG_5544.JPG
10. IMG_8748.JPG
11. RXM01956.JPG
12. RXM02063.jpg

13. RXM02200.jpg
14. RXM02723.JPG
15. RXM02820.JPG

Ready for your reference photos whenever you are.

These are the reference photos (set 2), the look I admire. Now write the recipe, following the rules I gave you.

Your shooting recipe

1. Shoot when the sun is low, with light from the side or behind your subject.
Situation: Big outdoor views like DSC00562, DSC00695, IMG_8748 and RXM01956.
Why: Low light gives long shadows and warm color, and flat, hazy light makes a wide view look dull.
Guess: The reference photos look like they were taken near sunrise or sunset, but I can't know that.

2. Let the sun peek through something, so it becomes a small spark instead of a big blast.
Situation: DSC02000 and IMG_0397.
Do: Step sideways until the sun is half hidden behind leaves, a branch or an edge. In DSC02000, step back so the dark car doesn't fill half the frame.
Why: A small glow adds mood, like the sun in IMG_5288 and IMG_5070. A big dark shape just eats the picture.

3. Shoot through something close to you, like leaves, an arch or branches.
Situation: IMG_8748 (the red chairs), RXM01956 (the road and sea) and DSC00562 (the runners).
Do: Move until a few leaves, a branch or the flowers at the bottom edge sit around the frame.
Why: A frame around the scene pulls the eye inward and adds depth, as in IMG_5071 and IMG_5286.

4. Wait for one clear subject, and let it stand apart.
Situation: DSC00562 (many runners), DSC00695 (the cows), IMG_5544 (the lion) and DSC01668 (the crowd).
Do: Wait until one runner, one cow or one walker is alone in the best light. For DSC01668, shift your position until one person isn't overlapped by others.
Why: Your eye needs one thing to land on, like the single figures in IMG_5282 and IMG_5288.

5. Keep dull sky out of the frame.
Situation: DSC00562 and RXM01956, where gray or hazy sky takes up a big part of the picture.
Do: Tilt the camera down so the sky is only a thin strip, or leave it out.
Why: Empty gray space makes the picture feel weak, and the references fill the frame with detail.

6. Pick a bright spot and let the shadows go dark.
Situation: DSC01343 (the lotus leaves) and IMG_1592 (the white cat).
Do: Move until one lit leaf, or the cat's face, sits against a darker background. Rule of thumb to try: make the shot a little darker than the camera suggests, so the bright part stays rich.
Why: Deep shadows around a lit subject give the punchy look of IMG_5283 and IMG_5284.

7. Get low, or put something blurry close to the lens.
Situation: IMG_1592 (the cat) and RXM02063 (the flag on the beach).
Do: Crouch to the cat's eye level. At the beach, kneel and let sand or the fence be soft in front. Rule of thumb to try: use the lowest f-number your lens allows.
Why: A soft foreground makes the sharp subject pop, like the blurred woman in IMG_5283 and the puddle shot IMG_5287.
Guess: I think the blur in those references came from a wide-open lens, but I can't confirm it.

Your main weakness: In many of your photos the subject is tiny and lost in a big, evenly lit scene, with nothing close up to lead the eye. You can see it in IMG_5544 (the lion), DSC00562 (the runners), DSC00695 (the cows) and IMG_8748 (the red chairs). The references nearly always have one clear subject and some dark or close framing around it.
